SUMMARY

Gameplay Programmer with 2+ years of professional Unity (C#) experience building scalable mobile game systems for titles with 1M+ downloads. Specialized in UI systems, LiveOps pipelines, and performance optimization for low-end devices. Proven track record collaborating with design and art to deliver features on aggressive release cycles while maintaining clean architecture using SOLID and design patterns.

SKILLS

- **Languages:** English (Native), French (Advance)
- **Core:** C#, JavaScript/Node, React, TailWind CSS, Python, SQL, C++
- **Practices:** Agile workflow, OOP, SOLID principles, software design patterns, TDD basics
- **Game:** Unity UI, LiveOps, mobile optimization, asset pipelines, Unity ECS
- **Web:** REST APIs, Jest, Responsive Design
- **Tools:** VS Code, Git, Jira, Jenkins, Rider, Xcode

EDUCATION

Ontario Tech University

Oshawa, Ontario

Master of Science; Major in Computer Science

2022

- GPA: 4.15/4.3
- Successfully built VR adaptive difficulty module using physiological sensors 🔗
- Published 6 peer-reviewed papers on VR applications
- Led tutorials as a teaching assistant in emerging technologies, game hardware and game development workshops

Ontario Tech University

Oshawa, Ontario

Bachelor of Information Technology; Major in Game Development

2019

- Minor: Production Management
- GPA: 3.5 / 4.3
- Received extensive education on subjects such as networking, AI, and data structures and algorithms
- Developed and completed VR simulation capstone 🔗

CERTIFICATES

Meta Back-End Developer – In Progress

(Expected 2026)

- Learned back-end development and technologies such as Python, SQL, Django, Linux and RESTful API
- Implemented newly learned technology to create portfolio website

Meta Front-End Developer

2025

- Developed and tested responsive single-page application using React
- Gained experience in API consumption, HTTP protocols, and unit testing with Jest
- Successfully completed 9 courses with a cumulative grade of 97%

EXPERIENCE

Budge Studios 🔗

Montreal, Quebec

Junior Gameplay Programmer

Dec 2023 - March 2025

- Developed core gameplay systems for 2 mobile games (Barbie Franchise), contributing to +1,000,000 downloads
- Built reusable, scalable code in Unity(C#), applying SOLID principles and design patterns, resulting in clean code base
- Worked in Agile sprints using Jira and Confluence, delivering updates on tight deadlines
- Collaborated cross-functionally with art, design, and audio teams
- Optimized UI/UX elements to improve user interaction and engagement
- Wrote +10 system documentation reports on Confluence, improving system knowledge and usage for +100 team members

- Engineered core systems and mechanics in Unity (C#) for an upcoming game title
- Designed a modular codebase, improving scalability and iteration time by 90%
- Collaborated with a multidisciplinary team to guide technical implementation for a start-up company
- Consulted team and created documentation providing clear instructions for autonomous art integration saving the company \$50/hour

RELEVANT PROJECTS

Barbie Dreamhouse Adventure (LiveOps) - Budge Studios

Mobile Game | Unity, C# | 2023-2025

- Delivered gameplay features and UI updates for high-traffic children's game
- Integrated new game features improving user engagement and retention, sustaining +30,000 concurrent monthly users
- Collaborated cross-functionally with art, design, and audio teams to ensure smooth integration of +10 features and +2 locations
- Used Jira and Agile track progress and resolve blockers for +35 2-week sprints, resulting in fast iterable development
- Utilized Unity ScriptableObjects to store and manage large amounts of data for use in +100 Unity components
- Improved download size and loading time by utilizing Unity Addressables
- Conducted code reviews and debugging using JetBrains Rider, to identify inconsistent coding standards and errors before merges
- Employed Jenkins for CI/CD to identify game-breaking bugs, resolving conflicts within 5 minutes

Barbie Magical Fashion - Budge Studios

Mobile Game | Unity, C# | 2024-2025

- Revamped 10 year old project using Unity, C# and design patterns to improve gameplay, resulting in +70,000 downloads a month since rerelease
- Solved game breaking bug causing a region of players from playing the game
- Developed gameplay stages using OOP to create reusable and extensible code base, improving development time by 89%
- Collaborated with designers and artists to integrate gameplay features and art assets to match concepts
- Utilized collaborative skills to design gameplay system with other developers, reducing merge conflicts
- Optimized particle spawning by creating a pooling system, improving computational load

Lunch Boxing (Start Up, NDA) - Butterware Studios

Steam Game | Unity, C# | 2024-2025

- Engineered core systems and mechanics in Unity (C#) for an upcoming game title
- Constructed a modular codebase, improving scalability and iteration time by 90%
- Designed game modes based on concepts to improve game replayability and retention
- Developed 3 new game modes to present to investors for additional funding

Portfolio Website (SPA) - Personal Project

Web App | React, JS, Tailwind CSS | 2025

- Utilized Figma to design a responsive front-end
- Developed portfolio using React to show of personal projects
- Implemented React's component based integration to create +5 components, speeding up development time 99% and have cohesive design site wide
- Used Tailwind CSS to create responsive web application that is highly interactive
- Made use of NPM for libraries and frameworks to create hamburger menu for mobile and routing
- Employed Vite to bundle project for faster deployment
- Deployed website using GitHub Pages to host web application

Little Lemon Restaurant (SPA) - Meta/Corsera Capstone

Web App | React, JS | 2025

- Built a full responsive, accessible React app with semantic markup
- Integrated RESTful API calls and unit testing via Jest
- Employed Git for version control
- Made use of Formik and Yup for form handling and validation
